

Project Description

Title: Evently

Description: With the app Evently, we want users to be able to browse the upcoming events by category, location, and date and register for their favorites. Users can create accounts to manage their bookings and receive event updates.

The events can be created and managed by the admin. They can modify the event information such as date, place and price, and keep track on the attendees and the revenue for each event.

User Stories

User account

As a user,

I want to be able to create an account,

So that I can mark my favorite events and manage my registrations.

Wireframe

The wireframe shows a web page layout on a grid background. At the top, there is a header bar. On the left of the header is a circular icon containing an envelope. In the center of the header is the word "Evently" written in a red, cursive font. On the right of the header is a rectangular button labeled "Log in". Below the header, centered on the page, is a modal window. The modal has a title "Log in" and a close button "X" in the top right corner. Inside the modal, there are two input fields: "Email" and "Password". Below the "Password" field is a checkbox labeled "Keep me signed in". At the bottom of the modal is a "Log in" button. Below the modal, there is a link that says "No account? Sign in".

Acceptance criteria

- A user can create an account with their email and a password.
- An account has a profile which contains name, email, address and phone number, and the user can modify this at any time.
- A user has an access to a dedicated My Bookings page where they can find the events which they registered for.
- A user is required to login or signup before they can register for an event.

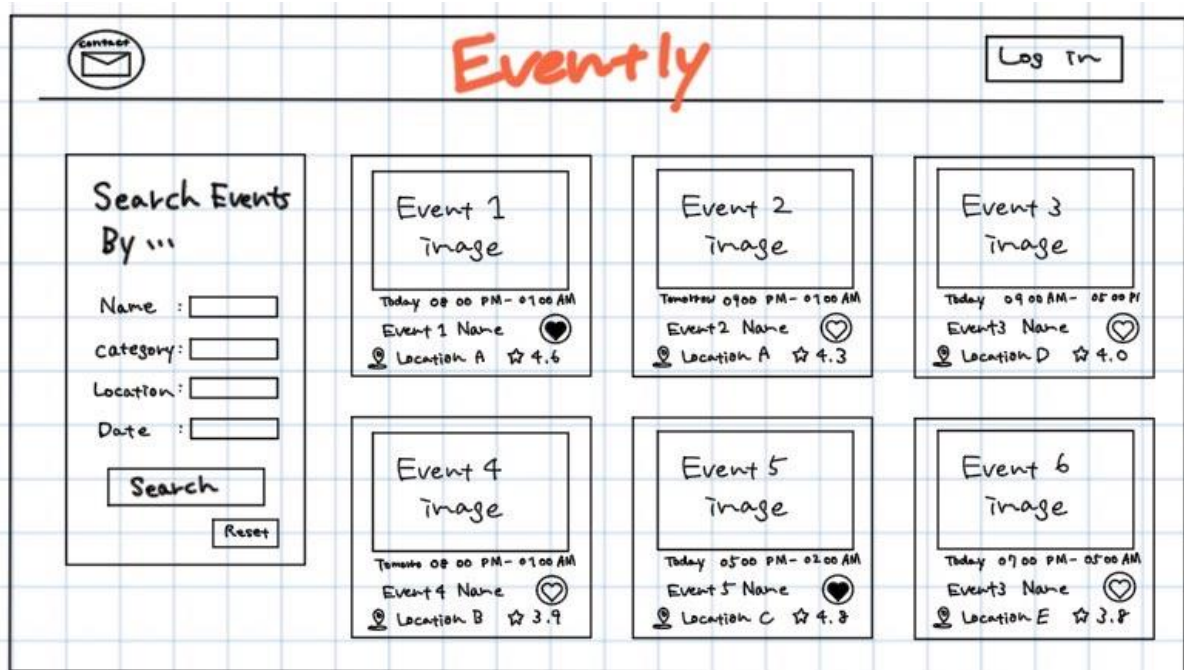

Overview events

As a user,

I want to be able to see the list of events,

So that I can check which events are available.

Wireframe

Acceptance criteria

- A list of all available events is displayed with name, date, location and event image.

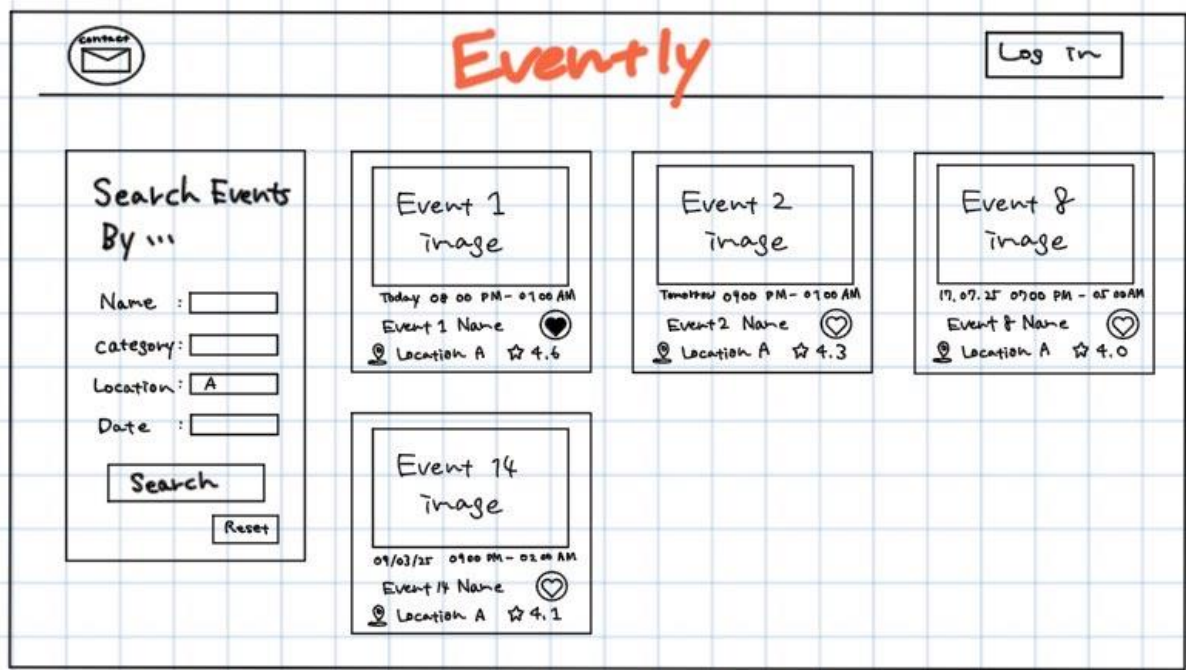

Filter events

As a user,

I want to be able to filter events by name, category, location, and date,

So that I can quickly find events that match my preferences and interests.

Wireframe

Acceptance criteria

- A user can sort events based on name, category, location, and date.

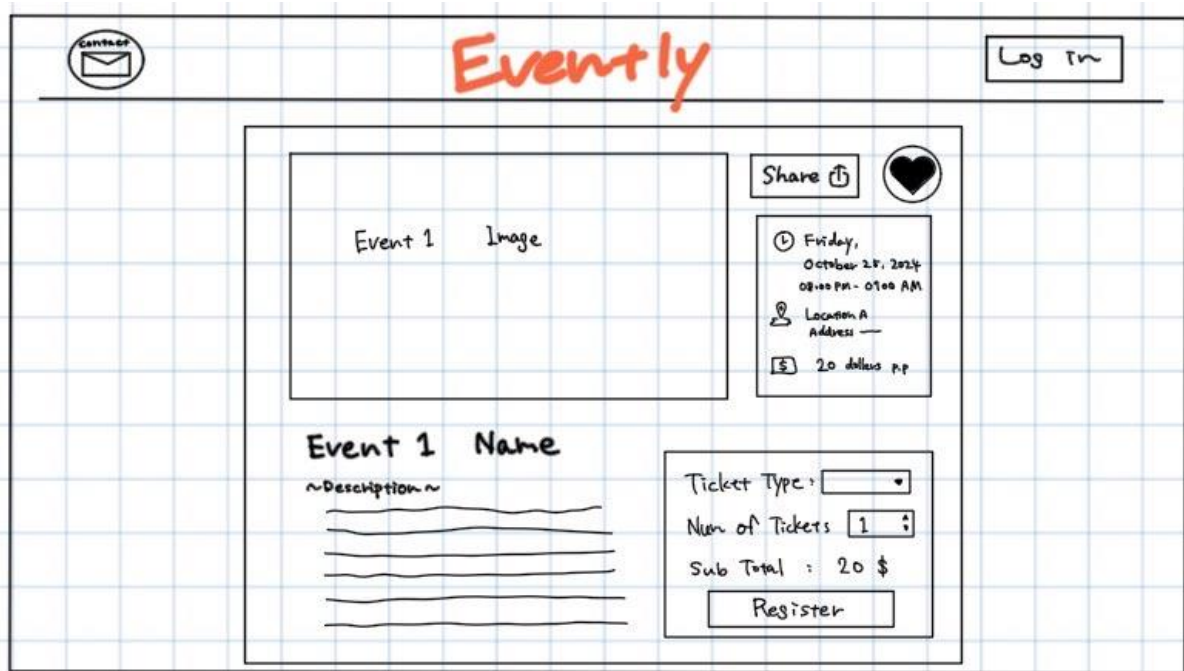

Overview event details

As a user,

I want to be able to see the details of the event,

So that I can evaluate the event and decide whether to register for it.

Wireframe

Acceptance criteria

- A user can click on any event in the list to access the event details page.
- On the page detailed information about the event can be found, such as description, address, price and a registration button.

Event registration

As a user,

I want to be able to register for an event,

So that I can secure my spot and participate in it.

Acceptance criteria

- On the event details page, a user can find a button to start a registration process.
- If a user is not logged in, they are prompted to log in or sign up before they can proceed.
- The registration page should clearly display the event details and registration options.

Payment for event

As a user,

I want to be able to make a payment,

So that I can finish the registration for an event.

Wireframe

The wireframe is a hand-drawn sketch on a grid background. At the top, there is a header bar with a 'Contact' icon (an envelope) on the left, the word 'Evently' in a large, stylized orange font in the center, and a 'Log in' button on the right. Below the header, the main content area is titled 'Confirm your registration'. Under this title, it says 'Event 1'. To the left of 'Event 1', there is a date and time: 'Friday, October 25, 2024, 08:00 PM - 09:00 AM'. To the right, there is a location icon and the text 'Location A Address'. Below the event details, it says 'Ticket type = standard', 'Num of Tickets = 1', and 'Total 20 \$'. To the right of these details is a box titled 'Payment Methodes'. Inside this box, there are three radio button options: 'credit/debit card' (which is selected), 'Digital wallet', and 'Bancontact'. Below the radio buttons are three input fields for 'card num', 'name', and 'exp date'. At the bottom of the payment box is a 'Pay' button.

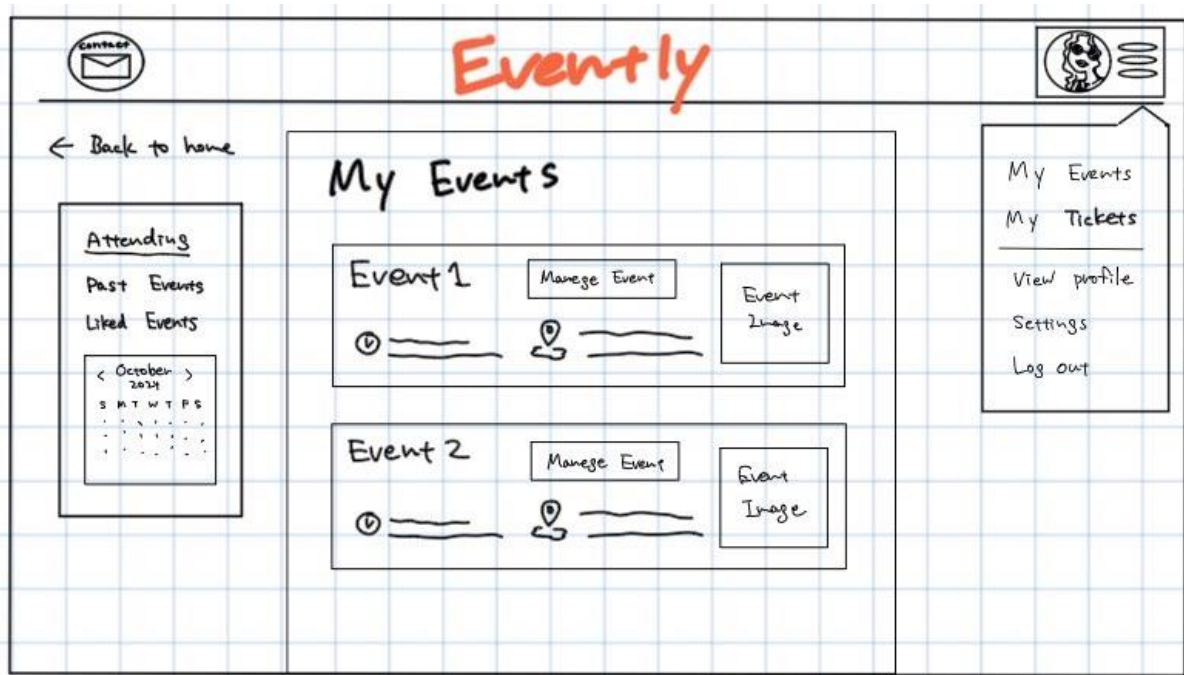

Acceptance criteria

- A user is taken to the payment step at the end of registration process.
- A user can choose a payment method from credit/debit card, digital wallet or local payment options.
- If the payment fails, an error message is displayed.
- After successful payment, the user is presented with a payment confirmation message with a transaction reference and get a ticket for the event.

Overview registered events

As a user,
I want to be able to see the events that I registered for,
So that I can keep track on them.

Wireframe

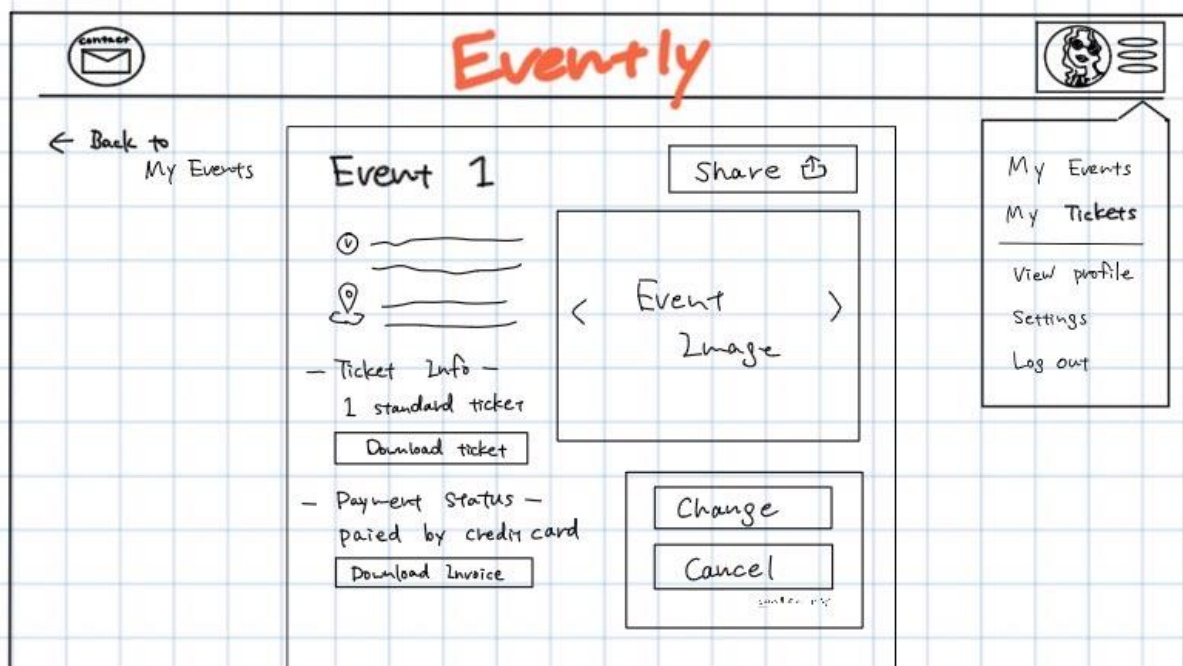

Acceptance criteria

- A user can access to my events page after logging into their account.
- This page displays a list of all events that a user is registered for, both upcoming and past events.
- A user can click on any of the events and see the details such as name, location, price, status, payment invoice and a ticket for the event.

Manage registered events

As a user,
I want to be able to manage my events,
So that I can update, cancel, or modify my event registrations based on my preferences or changes in plans.

Wireframe

Acceptance criteria

- On event detail page, a user can update, modify or cancel the upcoming event.
- A user can modify their information to change the name etc. on the ticket.

Event administration

As an admin,

I want to be able to create and manage the events,

So that I can efficiently organize and control event listings, track registrations, and update event details when necessary.

Wireframe

The wireframe is titled 'Evently' in red. It features a top navigation bar with a 'Contact' icon on the left and an 'Admin' icon on the right. The main content area is divided into three sections. On the left is a 'Search By...' sidebar with filters for Name, Category, Location, Date, Attendees, and Revenue, each with a corresponding input field and a 'Search' button. Below this is a 'Create New Event' button. The center section is titled 'Events' and contains a 'Create Event' modal window. This modal has fields for Name, Date, Location, Price, and a large text area for Description, followed by an 'upload images' field and a 'Publish' button. On the right is a sidebar with links for 'Event List', 'Settings', and 'Log out'.

Acceptance criteria

- After logging into the admin account, they can access the event management dashboard where the events can be created, modified and deleted.
- An admin is required to fill in all the necessary event details during the creation of an event.
- On the dashboard an admin can see all the events both in the future and past, and also filter/sort them by name, date, category, location, number of attendees and revenue.

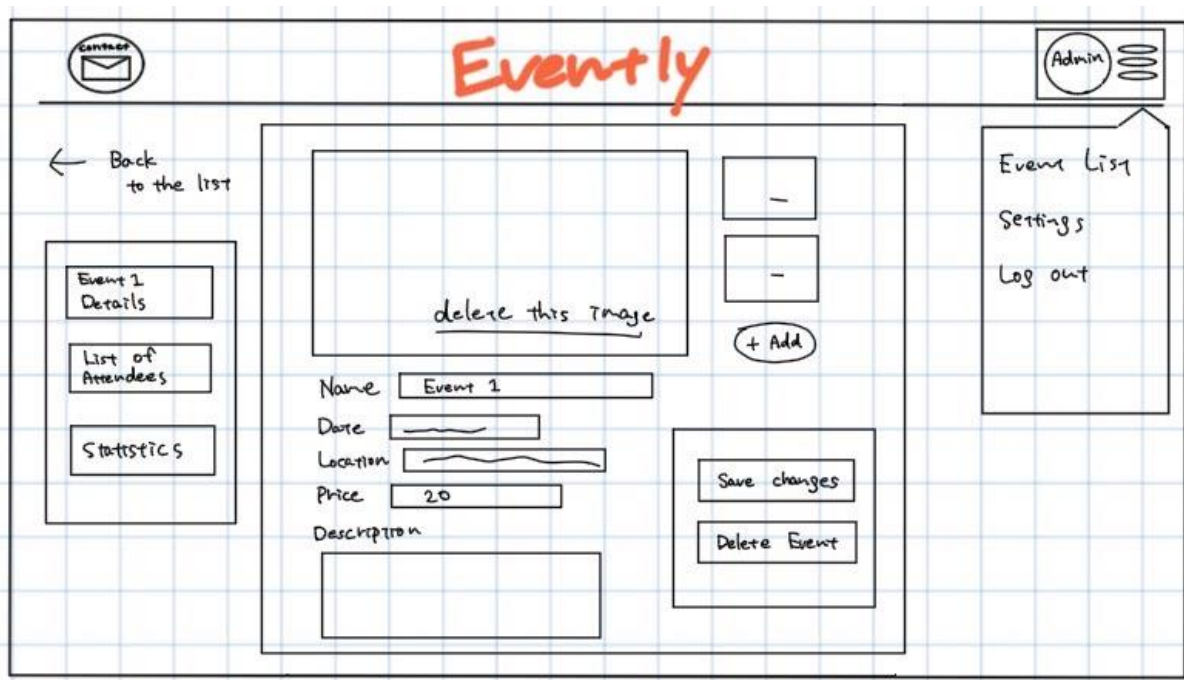

Overview administrative event details

As an admin,

I want to be able to check the attendees and the revenue,

So that I can analyze the event performance and predict the future event outcome.

Wireframe

Acceptance criteria

- An admin can access a detailed event overview page for each event on the event management dashboard.
- On the page an admin can see the event details including a list of attendees, the number of registrations and the revenue.
- An admin can click on each attendee and check the information such as contact information, registration date, number of tickets and payment status.
